

ProSight Data Protection Services MSP360 Backup

ProSight Data Protection Services (DPS) MSP360 Backup: Fully Managed Cloud Backup/Restore Services

ProSight Data Protection Services 360 Backup is a suite of managed services products powered by technology created by MSP360 (previously known as CloudBerry Lab) to address all key aspects of backup and recovery for small and midsize companies. MSP360 Backup provides high-end options for data encryption, compression, retention, and automation. A headline feature is the ability to store your backups on any leading public cloud, locally, or in a hybrid cloud/on-prem environment.

Remote Monitoring and Management utilities provide advanced capabilities such as backup operations automation; enterprise-wide installation, configuration and patching; versatile scripting; restoration status alerts; plus management reporting. MSP360 Backup/Restore permits file or image-based backup/recovery for virtual machines and physical devices and lets you create a backup/restore solution with a short Recovery Time Objective (RTO) and a fine-grained Recovery Point Objective (RPO).

With ProSight Data Protection Services 360, Progent's MSP360-certified consultants assist you to design and deploy a backup solution based on MSP360 software. Progent's experts will perform end-to-end monitoring and management to guard against data loss caused by user error, infrastructure problems, malicious insiders, and malware assaults including ransomware.

Bring Your Own Storage

MSP360 backup/restore is storage agnostic. You can send backups to virtually any public cloud storage service, to local devices, or both. This can represent a major savings compared to backup solutions that demand the use of specialized storage. Public clouds can also offer benefits such as multi-region storage locations, the ability to move to lower-cost storage tiers as data ages, unlimited as-needed storage scale, plus global redundancy for world-class resilience. Public clouds supported by MSP360 backup/restore include Amazon S3 and S3 Glacier, Azure, Wasabi, Backblaze B2 and Google Cloud.

How Progent Can Help Your Business Get the Most out of ProSight MSP360 Backup

Progent's consultants can assist you to install and manage MSP360 Backup utilities and services and to protect critical apps by delivering support such as M365 Exchange integration consulting, SQL Server integration consulting, Windows Server Hyper-V planning and deployment, and VMware-certified vSphere and vCenter expertise.

ProSight MSP360 Products

The ProSight 360 product family includes a variety of subscription backup services:

ProSight DPS 360 Desktop	ProSight DPS 360 Exchange
ProSight DPS 360 Server	ProSight DPS 360 GSuite
ProSight DPS 360 VM Host	ProSight DPS 360 Ultimate
ProSight DPS 360 SQL	ProSight DPS 360 B2 Cloud Storage

F E A T U R E S

- Supports popular cloud storage services and classes
- Long-term VM backup
- Local backups to standard and NAS storage devices
- Microsoft SQL and Exchange Server backups
- Change-only block-level backup for most cloud storage
- Data compression with gzip
- Create USB boot drive or ISO image for bare metal recovery
- Cloud-to-cloud and cloud-to-local backups
- Image-based copies of physical machines or VM images
- Hyper-V, VMware, VirtualBox, and RAW support
- Restore image-based backups as Amazon EC2, Azure VM, and Google
- Compute Engine instances
- Fast client-side deduplication relying on local capacities only
- Scheduling and scripting
- Create backup/restore chains for sequential plans
- AES-256 Encryption

B E N E F I T S

- Free your IT staff for strategic projects
- On-demand access to veteran backup and disaster recovery (BDR) experts at Progent
- Progent's GIAC information assurance specialists can help you implement the best tools and practices for working safely in the current threat landscape
